## PROJECTS

---

### SMART IRRIGATION USING IOT FOR PRECISION AGRICULTURE

May 2024

- Spearheaded the design and implementation of a precision agriculture IoT system, contributing to a 60% increase in operational efficiency and a 80% reduction in overall cultivation costs.
- Automated and optimized agricultural processes, resulting in a 70% decrease in farmer intervention and a substantial reduction in water wastage.
- Orchestrated the seamless operation of project sensors through the IoT Remote application, achieving a 40% improvement in system reliability.
- We have created a customized dashboard with the mobile application from which the farmers can continuously monitor their crops by enabling all the resources from the mobile application whenever needed.

### CI Pipeline Implementation

June 2024

- **Technologies:** Jenkins, SonarQube, Maven, Sonatype Nexus OSS, AWS (EC2, Security Groups)
- Developed and implemented a Continuous Integration (CI) pipeline using Jenkins to automate the build, test, and code analysis processes, reducing manual intervention by 80%.
- Integrated SonarQube into the pipeline to perform static code analysis and ensure code quality, setting up quality gates and webhooks for automated feedback which resulted in 30% reduction in code defects.
- Utilized Maven for managing project dependencies and build automation.
- Configured Sonatype Nexus OSS as the artifact repository for managing and storing build artifacts.
- Deployed and managed the application on AWS EC2 instances, including setting up and configuring security groups for secure access.
